

one solver, one set of results,
whichever door you come through

OpenHydroQual GUI

build, run, inspect

OpenHydroQual-Console

batch runs, cluster, CI, GIS

OHQ-GA

calibration

OHQ-MCMC

posterior, uncertainty

Python bindings

scripted model building

model.ohq

blocks, links, sources, constituents, rules, units,
parameters with priors, observations,
objective functions

loaded into OHQ-GA and
OHQ-MCMC with `--kernel`

OHQuery server / Docker

hosted models in a browser

ohq_generate

compiles this model to C++

libModel.so

plain C ABI, no Qt, no OHQ

10–15× faster
solves

OpenHydroTwin

live sensors, assimilation, forecast
